

Backend Developer

Meraj Khan

Title
Meraj Khan

Years of Experience
10+ Years

ABOUT ME:
Age: 29

SUMMARY

Skilled software professional and having more than 10+ years of software development experience in Web based multi-Tier applications and solutions on Microsoft Technologies with good knowledge on SDLC process. Particularly interested in Java, Springboot, Hibernate, WebService(REST/SOAP), Spring Security, MySQL, PostgreSQL, MongoDB, Docker, JavaScript, HTML, RabbitMQ, Kafka, Redis, micro-services, Elastic Search, Key cloak, Key Store, AWS. I am also expertise in API, complex & real-time application. Easily able to deploy applications under shared hosting domain as well as dedicated servers.

Ability to perform and deliver technically complex projects, meet deadlines and adaptable to ever changing priorities.

SKILLS

Front End Languages: HTML, CSS, JavaScript, jQuery, Bootstrap	Backend Languages: Java 8, Java 17, Java 21
Frameworks: spring boot, spring MVC, Hibernate, Microservices, Spring Data JPA	Databases: MySQL, PostgreSQL, Oracle 10g, Redis, Elastic Search, MongoDB

PREFERRED ENVIRONMENT

Windows, Mac, Git, SVN, AWS, Maven, Gradle

THE MOST AMAZING...

I have developed static, dynamic and real-time projects using Java with Spring Boot, Spring MVC, Hibernate and JSP/Servlet, web-services(REST/SOAP), Microservice, Kafka, Redis, Elasticsearch, HTML, CSS, JavaScript, MySQL, PostgreSQL, MongoDB, Tomcat, Docker, Kubernetes, AWS, IBM Smart Cloud, GCP. I have also expertise in Db designing from scratch for complex and large projects with optimization.

Projects

Senior Software Developer June.2021 – July 2025

Project Name: Vida Sign

VIDA Sign is an application that can replace handwritten or wet signatures to enhance productivity for contracts, business documents, and other legal documents. VIDA Sign provides the user with a seamless experience of signing documents digitally that is safe and easy.

Features:

- Analyzing the requirements received from the client.
- Working on impact analysis and coding.
- Solving Production bugs at the desired time with a quick feasible solution.
- Working with AWS & maintaining CI/CD pipeline.
- API creation offering all CRUD operations with Java Rest Client.
- Assisting and mentoring the team members for issue resolution.

Technologies:

Java, Spring Boot, Rest Web Services, Micro Services, Spring Data JPA, AD, AWS	Java	MSSQL	Windows 10
--	------	-------	------------

Senior Software Analyst June.2019 – June 2021

Project Name: IMS Engineering

IMS Engineering is a team which develop and maintain those Portals which is used to maintaining user profile of bank client and customer data and there are 5 modules from which 2 is developed from scratch by IMS Team. Those modules mainly maintain Data of their employees and all their application and with two new modules we have created approval system for bank client as well as customer.

Features:

- Analyzing the requirements received from the client.
- Working on impact analysis and coding.
- Working with AWS & maintaining CI/CD pipeline.
- API creation offering all CRUD operations with Java Rest Client.
- Assisting and mentoring the team members for issue resolution.

Technologies:

Java, Spring Boot, Rest Web Services, Micro Services, Spring Data JPA, AD, AWS	Java	MSSQL	Windows 10
--	------	-------	------------

Senior Software Developer 2017–June 2019

Project Name: Mosaic CatLog (AIQ)

Mosaic CatLog is a logistic product which is using by many clients and discover is main module in it. This module is mainly because it's providing Connection Bridge to data with all modules and discover itself contains data sources concept so that other modules can use data sources and implements their own functionalities. It's developed using Java 8, Rest, Spring Boot, Micro-Services, Hibernate, Elastic Search, Key cloak and MySQL.

Features:

- Working with Elastic Search data modelling.
- Working with designing schema for the entire application with all business demands.
- Search queries for scenarios and creating API.
- API and service creations for the feature.
- API creation offering all CRUD operations with Java Rest Client.
- Assisting and mentoring the team members for issue resolution.
- Fixing live defects and performing code reviews.

Technologies:

Java, Spring Boot, Rest Web Services, Micro Services, Spring Data JPA, Key Cloak, Elasticsearch, IBM Smart Cloud.	Bootstrap 4, CSS, HTML5
---	-------------------------

Additional Experiences

Education

Java Developer Oct 2015 – June 2017

Project Name: E challan Payment

This application involves all the information of the offences of MTP, and We can make Payment of the offence. This project redirects many payment sites for payment of challans.

Features:

- Analyzing user requirements and formulating project scope and objectives.
- Developing software, architecture, specifications, and technical interfaces.
- Developing user GUI interfaces and client displays.
- Database connectivity and manage database.

Technologies:

Spring 3.0, Hibernate 3.0, JSP, JavaScript, Eclipse, SVN, Git, Tomcat, JIRA, Maven, Postgres9	Java	Postgres	Linux
---	------	----------	-------

I mainly worked as a front end & backend developer, creating static website with html and animation with jQuery. I also have experience in Real-time and complex projects, Micro-Services Projects, Banking Projects, Logistics, Payment Integration,

RCERT
Nagpur University – Chandrapur, India

2012 - 2015
